

PRE Foals Rejected by ANCCE-LGPRE are Registered in the PRE Fusion Horse Studbook - Main Section.

The new 2017 Spanish Studbook Regulations will NOT permit foals born from two PRE parents with the following characteristics to be registered as PRE Horses in the ANCCE-LGPRE Studbook.

Above: Purebred PRE Mare registered in the PRE Main Studbook and Approved for Breeding before the change in Regulations; her white markings and blue eyes would now prevent her registration even into the PRE Foal Section. Dam of the filly below.

Foals with any of the characteristics listed below cannot be registered as PRE Horses however they WILL be Registered as PRE Fusion Horses with full pedigree passports for the PRE Fusion Horse breed:-

- a) One Blue Eye and One Brown ie., Odd Coloured Eyes
- b) Blue Eyes which are not as a result of a recognised Dilution gene.
- c) One or more White Leg markings that extend over most of the knee or hock joint.
- d) A White Spot or Patch anywhere on the Body with a diameter of 3cms or more (this does not mean a white spot caused by scarring)
- e) White areas on the Head which invade one or both eye-orbits, not including broad blazes which are acceptable for PRE Studbook providing the white does not go across most of the eye-socket)

Above: Purebred PRE Filly with White markings that now prevent registration in the ANCCE-LGPRE Studbook.
